

# What is Biotechnology?

**Use the Internet to find information and images that describe the biotechnology industry, its companies, and its products. Create a PowerPoint® (PPT) one-slide collage that explains biotechnology to a nonscientist.**

1. Locate several definitions of biotechnology from different sources on the Internet. Find one definition that you think is representative of most of the others and copy and paste it into the center of the PPT slide.
2. Find 8-10 different examples of biotechnology products or services that use biotechnology processes. Next, do an image search on Google to find images that represent these products or services. Copy and paste the images onto the PPT slide to create a biotech collage,
3. At the bottom of the slide, record the URL (webpage address) of the definition you used and your name and the date. Save a copy of the slide for future reference. Print up a copy of the slide collage.
